

mySWICA

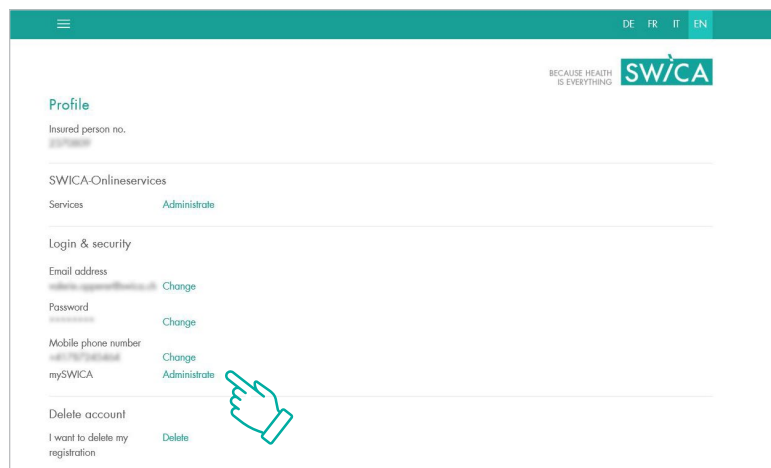

Authorisation management

Authorisation management in mySWICA allows you to decide for yourself who in your family can access your data.

To make this setting on your profile, you have to [log in here](#) using your e-mail address and password.

You can define your authorisation management settings under **“Administrate mySWICA”**.

Authorisation management from the point of view of the head of the family

As head of the family, you are authorised by default for all family members.

Under **“Administer family authorisations”**, you have the option of granting your partner and your adult family members access to the family accounts. This access will only be visible to adult family members if they have their own account.
